How to Write Articles-

Here are a few basic steps to take to craft an interesting, informative article.

Method 1 of 3: Come Up With An Idea

1. Get to know your audience. Decide who you need to write for before proceeding with planning or writing an article. Identify the needs of your readership. What do your readers need to know? How does your own knowledge match up against the information they need? This will be the easiest way for you to find a topic to write about.
2. Be unique. If you are writing an article about something that other people are also writing about, try to be unique in how you approach the material.
3. Be passionate. You should care about the topic you choose to write about. Your enthusiasm will show in your writing and it will be much more engaging for your readers.

Method 2 of 3: Research Your Idea

1. Learn the basics. Get the general explanation of whatever you are trying to write about. This will give you a basic framework for what to look for as you research.
2. Find reliable sources. Now that you know what to look for, research your topic. You can use the internet, a library, conduct interviews, watch documentaries, or whatever you feel is appropriate to teach you everything you need to know about your topic. Be an expert!
3. Get different types of material. During your research, look for material that isn't text. This can be used or altered to add to your article.

Method 3 of 3: Write Your Article

1. Decide your length. Does this article have a word count? Do you need to fill a certain number of pages? Consider what type of content you're writing about and how much space that can fill, as well as how much needs to be written in order to cover the topic adequately, before proceeding with writing your article.
2. Outline your article. Before you begin formal writing, you will want to outline your article.
3. Edit your work. Before you submit your work, you will want to do some editing and revision. If time allows, wait for a day or two before editing.
4. Respect the rights of other writers. If you are using information from an external source, be sure to cite the source at the bottom of the article.
5. Submit your work. When you've finished, submit your work in the appropriate manner.

ABSTRACT:

Among heavy metals cadmium is of great concern since it is more toxic to aquatic organism such as fishes etc. which are important components of food chain. The toxicity of cadmium to the fish Rasbora- daniconius for 24h was tested according to the OECD (1992) guidelines No. 203.

Abstract Report: The Title Accurately Said The Study was About.

INTRODUCTION:

The matching revelation of accumulation of heavy metals, organic toxicants, and pesticides in the aquatic biota is causing alarming concern to environmental biologists who are constantly striving for restoration of the environmental quality through formulating rules and norms for release of toxicant to cause least damage to the organisms.

Introduction Report: This Article Include Full Introduction, Methods, Results & Introduction Section.

METHODS & MATERIALS:

Rasbora - daniconius (Hamilton- Buchanan), an indigenous freshwater fish were collected from freshwater ponds in MIDC area Waluj, Aurangabad and stored in large aquaria containing top water. Care was taken to avoid overcrowding of fishes. Fishes were acclimatized to laboratory for a week prior to toxicity larvae continued aeration was provided for optimum oxygen supply.

Methods & Materials Report: Tables/Boxes/Diagram & Images are Used to Explain Specific Points or Background Information. Figures That The Plotted Parameters are Clearly Mentioned.

RESULT:

Results presented in table 3 show the bioaccumulation of cadmium in different tissues like gill intestine and tail muscles of the fish, Rasbora- daniconius after exposing to sublethal concentration (20ppm) of cadmium chloride for 24, 48, 72, and 96 hours. Gills showed maximum accumulation where found intermediate with the values of muscles as compared to controls.

Result Report: Figures are Imported to Provide Explanation for Background Information. Conclusion of This Paper Clearly Supported Results.

DISCUSSION:

The toxicity is defined as harmful effect of a pollutant ion target organism OECD(1992) defined acute toxicities as " the adverse effect occurring within a short time total administration of a single dose of substance or multiple doses given within 24h statistically derived single dose of a substance that can be exposed to cause death in 50%of the animals. The Lc50 in its simplest form is dose of a compound that causes 50% mortality in a population.

Discussion Report: The Text is Rounded off with a Conclusion that Discusses the Implication of The Findings & Ideas Discussed & Their Impact on Future Research Direction.

SUMMARY OF ARTICLE

	Very High	High	Average	Low	Very Low
1. Interest of the topic to the readers	✓				
2. Originally & Novelty of the ideas		✓			
3. Importance of the proposed ideas	✓				
4. Timelines		✓			
5. Sufficient information to support the assertions made & conclusion drawn					
6. Quality of writing(Organization, Clarity, Accuracy Grammer)	✓				
7. References & Citation(Up-to-date, Appropriate Sufficient)		✓			

This Article is Innovative & Original, No Plagiarism Detected

FUTURE RESEARCH SUGGESTIONS

This Article can expand further research for MINOR/MAJOR Research Project at UGC

POST PUBLICATION:

Your article is published on following sites...you can read it.
