ABSTRACT:

A large body of research has attempted to explore the relationships between women's empowerment and their reproductive health practices in some developing countries. The objective of this study is to investigate whether women's empowerment in Nigeria has relation with their reproductive health outcomes. The study uses the Nigerian Demographic Health Survey (NDHS 2008).

Abstract Report: The Title Accurately Said The Study was About.

INTRODUCTION:

Being a woman has implications for health. (Fathalla, 1997) classified the health needs of women into four categories; First, health needs related to the sexual and reproductive function, second, women have an elaborate reproductive system that is vulnerable to dysfunction or disease, even before it is put to function or after it has been put out of function, third, women are subject to the same diseases of other body systems that can affect men.

Introduction Report: This Article Include Full Introduction, Methods, Results & Introduction Section.

METHODS & MATERIALS:

This study uses the Nigeria Demographic, and Health Survey (NDHS) conducted in 2008. The NDHS is a nationally representative survey which was conducted by the Nigerian National Population Commission (NPC) in collaboration with ICF Macro, USAID, PEPFAR and UNPA. A sample of about 34,070 household was used, 33,385 women of aged 15 – 49; 15, 486 are men of age 15 – 59 and 28,647 are children.

Methods & Materials Report: Tables/Boxes/Diagram & Images are Used to Explain Specific Points or Background Information. Figures That The Plotted Parameters are Clearly Mentioned.

RESULT:

Table 1 show the percentage distribution of socio-economic and demographic characteristics of the sample of currently married women who are of reproductive age 15 – 49 years in Nigeria. Majority of the women as shown in the sampled analysis from the populations are young (less than 35years) married women, with age at first birth below 35 years and have between 3 - 5 children.

Result Report: Figures are Imported to Provide Explanation for Background Information. Conclusion of This Paper Clearly Supported Results.

CONCLUSION:

In conclusion to this study of the influences of women's empowerment indicators on reproductive health outcomes of a sample of currently married women in Nigeria reveals that women's empowerment indicators considered in the study has a direct and significant influence on women's reproductive health practices. The study clearly shows that there is a significant relationship between women's participation in household decision making and their reproductive health practices in Nigeria.

Discussion Report: The Text is Rounded off with a Conclusion that Discusses the Implication of The Findings & Ideas Discussed & Their Impact on Future Research Direction.
