ABSTRACT

The present investigation was undertaken to assess the effect of human hazards on the biochemical parameters (lipid, protein and cholesterol) of investigated organs like liver and kidney of Labeo calbasu. The results showed that the biochemical changes induced in liver were mainly represented by depletion of protein, lipid and cholesterol contents in all studied organs of the investigated sites as compared to control fish sample.

Introduction

As all of us are aware about the fact that water is a primary driving force for major physical, chemical and biological changes all over the world. It is pertinent that oceans and seas contain approximately 97% whereas fresh water resources contain 3% of the entire water reserve of the earth.

A Good Introduction :-

Importance of the expected results to the general inquiry. Extremely briefly depict the exploratory configuration and how it achieved the expressed destinations.

Materials

For evaluation of biochemical parameters the fresh water Indian major carp, *Labeo calbasu* was selected as the test animal in present study as it is found in abundance throughout the year in Betwa river. Fishing was done during early hours with the help of professional local fishermen in different periods based on the climatic conditions of Betwa River.

A Good Materials :-

Materials may be accounted for in a different passage or else they may be distinguished alongside your systems. Include or supplies that are not generally found in research centers.

Result

Liver is the primary organ of detoxification (Hulterer et al., 1969) and hence it is expected that toxicant could reach there for detoxification and disposal. This results in structural changes in the liver, in the arrangement of hepatic cords leading to the alteration of liver metabolism and its biochemical content.

A Good Result :-

Abridge your discoveries in content and show them, if fitting, with figures and tables. In content, depict each of your outcomes, guiding the per user toward perceptions that are generally significant.

Conclusion

Must add Conclusion in your article.

A Good Conclusion :-

Thus, the research have wider scope for new academician and research scholars.

REVIEWER COMMENTS

- The work, as with all work advancing from this specific gathering, is generally sound.
- My remarks here are concerned singularly with the association of the composition.
- Thought of these focuses will, I accept, lead to an enhanced report that better shows the key ideas and conclusions.
