REVIEW OF THE ARTICLE

Analysis Of Agricultural Scenario: A Case Study On Bankura District, WB, India

Amborish Das[1] and Dr. G.C. Debnath[2]

ABSTRACT:

The TITLE matches with the contents of the paper Bankura is one of the important districts in West Bengal because of it cultural as well as historical back ground. The main economic activities of the district are directly or indirectly related to the agriculture or it is agro-economic base district. Around 70% of the district population engages in this field although a vast area of the district is not cultivable due to undulation of land and morum soil. In this paper we discuss the overall agricultural scenario of Bankura district

INTRODUCTION:

Author introduced the topic neatly and clearly Bankura is one of the important districts in West Bengal because of it cultural as well as historical back ground. The main economic activities of the district are directly or indirectly related to the agriculture. Around 70% of the district population engages in this field. According to Vaidyanathan (1992) cropping pattern in an area depends mostly up on agro climatic, technical and institutional factors. So it is know that weather plays as a dominant factor in determining the agricultural activities.

METHODOLOGY:

This study was conceptual in nature. Author described a variable under study in detail. The work is entirely based on secondary data obtained from secondary sources, namely District statistical Handbook of Bankura District (2006, 2011 and 2013) of Bureau of Applied Economic and statistics, District Gazetteer of Bankura District and many others literature and research papers.

PRESENTATION OF RESULTS:

The amount of data presented was sufficient and appropriate. Tables, graphs, or figures were used judiciously and agree with the text Bankura is an agro-economic base district although a vast area of the district is not cultivable due to barrier of physical environment. A number of crops are grown in the district like different types of cereals, oil seeds, fibers, fruits and vegetables. Rice is the mostly cultivated crop in the district. Day by day oil seeds, fruits and vegetable cultivation become popular. More research and more attention should be given on this field as maximum percentages of population of the district are engage in this field.

REFERENCES:

Prior publication by the author(s) of substantial portions of the data or study was appropriately acknowledged.

RELEVANCE:

The paper is properly organized and demands appreciation. I think the paper will satisfy the interest of the readers.
