## SOCIO-ECONOMIC INEQUALITY AND ITS EFFECT ON HEALTH CARE OF A FAMILY

Dr. Surekha Kheerasagar<sup>1</sup> and Mrs. Shakera Banu<sup>2</sup>

<sup>1</sup>Professor and Research Guide Department of Studies and Research in Education, Gulbarga University, Kalaburagi.

<sup>2</sup>Research Scholar, Department of studies and research in education, Gulbarga University, Kalaburagi.

### ABSTRACT

**S**ocio - economic inequality it means income or wealth in equality captured only a narrow slice of inequality in society non income dimensions of inequality in health status and educational attainment are equally if not more important. the two dimensions, income and non income could be brought together to defined a broader measure of socio - economic inequality the relationship between unemployment and health had strong association between unemployment and poor health, while those in the poorest circumstances are in the poorest health, this is part of a broader social gradients in health.

**KEYWORDS** :Socio-Economic Equality, Health Care, Family :

### 1.INTRODUCTION

Economic inequality are most obviously shown by peoples different positions within the economic distribution - income pay, health. however, peoples economic positions are also related to other characteristics such as whether are not they have a disability, their ethnic background income equality is the extent to which income is distributed unevenly in group of people, income not just the money received from employment (wages salary, bonus etc ) inequalities in distribution of health care and its access including inequalities relating to social class, gender, culture etc have been measured using many different outcomes including infant death mortality rates all effect on family.

### 2. DEFINITION :-

1. **KAWACHI ET AL** defines "an individual's socio-economic status as a person's socio and economic position in relation to others based on income, education and occupation.
2. The Scottish Government defines income inequality as the gap between the highest and lowest earning households.
3. All the human development index - 2017 the average person in society. which is less than, when there is inequality in the distribution of health, education and income.

**HEALTH CARE OF FAMILY:** - Is the maintenance or improvement of health via the diagnosis treatment and prevention of diseases, illness, injury and other physical and mental health.

1. **All to WHO** ( World Health

Organisation) a well functioning health care system requires a Robust financing mechanism as well trained and adequately paid workforce; reliable information on which to base decisions and policies and well maintained health facilities and logistics to deliver quality medicines and technologies.

## 2. All to maternal and child health bureau:

Family centred care assures the health and well being of children's and their families through a respectful family – professional partnership. It honours the strength, cultures, traditions and superties that everyone brings to their relationship. Family centred care is the standard of practice which results in high equality, service for health care of family.

### Aims, Objectives Of Socio-Economic Inequalities And Its Effects On Family :

1. To ensure the widest possible availability of authoritative information and guidance on health matters.
2. WHO secures broad international distribution of its publication and encourages their translation and adaptation, but helping to promote and protect health and prevent and control disease.
3. Its key aim and responsibility is to provide guidance on and act upon the social and economic determinants of health.
4. Its objective is to monitor, review and systematize the policy implementation of social and economic determinants of population health.
5. We aimed to describe socio-economic disparities in the United States across multiple health indications and socio-economic groups.
6. Reduction of health inequalities is a primary public health target in many countries.
7. A change of proportion of low income families might affect child inequalities.
8. The aim of this study is to investigate the effect of increased percentage of low income families on child health inequalities.

### SOCIETY EFFECT ON HEALTH :

1. The social determination of health are the collective set of conditions in which peoples are born, grew up, live and work. These include housing, education, financial, security and built environmental as well as the health system
  - ✦ health inequalities are avoidable inequalities in health between groups of people within countries between countries. These inequalities arise from inequalities within and between societies, social and economic conditions and their effect on peoples lives determine their risk of illness and the action taken to prevent them becoming ill or treat illness when it occurs.
  - ✦ The social determination of health's are the circumstances in which peoples are born from up line work and age, and the systems put in place to deal with illness these circumstances are in turn shaped by a wider set of forces economics social and policies and politics.
  - ✦ Researchers studying global economic inequality have used their approach to highlight the relative wealth's of poor individuals in rich countries compared to well off individuals in poor countries for knowing best results, but a family in a society handle lots of problem and circumstance to maintain good health.

### NATURE

Equality in health is an important and long standing goal for society. The poor, by virtue of lower income, unsanitary living conditions, poor access to health care not only tend to have higher level of mortality but despite needing it more, have lower level health care use compared to those who are

better off. in order to improve inequalities in health care and socio-economic living of family to suggest incentivising the use of public sector facilities among the poor, by keeping healthy requires in moderate forms and supply for peoples to improve their health in low expenditure.

### PURPOSE OF THE STUDY :

Socio-Economic Status (SES) underlines their determination of health care environmental exposure and health behaviours in addition, chronic stress associated with lower SES may also increase morbidity and mortality.

- ✦ Reducing SES disparities in health will require policies initiatives addressing the component of socio economic status income, education and occupation as well as the pathway by which these affect health.
- ✦ Health care ( including public health ) is special because it protects normal functioning, which in term protect the range of opportunities open to individuals.
- ✦ The distribution of goods other than health care accent population health and its distribution.
- ✦ The principles of justice describe a fair distribution of the social determinants of health inequalities are unjust.

### DISCUSSION :

A large number of factors contributed to social and ethnic disparities in health status. health care professional researchers and policymakers have believed for some time that access to care is the centrepiece in the elimination of these health access to care is including personal, financial and structural barriers.

However in order to be effective in reducing disparities in health care and health status important limitations of previous studies need to addressing including the lack of control groups, non random assignment of subject to the not validates, improving the target of high risk of population focusing on th most important contributing factors including measures of apparentness and quality of care and health outcomes and prioritising dissemination efforts and the purpose and effect of this paper is to provide a perspective on the literature regarding intervention to reduce ethnic and social class health care disparities and to discuss factors that are potentially important when it deserving evaluating and implementing. although the fundamental inequalities that exist in society ( including) social, economical and environmental factors) are important contextual contributors to disparities in health status should reduce although from societies for a better and best nation.
